

Asset Score Webinar Training Series

Performance Systems Development and Pacific Northwest National Laboratory partnered to offer a series of webinar training in 2017 to help users develop a better understanding of the use and best practices of the Building Energy Asset Score tool. Copies of these recorded webinars are available upon request by visiting <https://help.buildingenergyscore.com/support/home> and submitting a ticket.

Introduction to Building Energy Asset Score

Learning Objectives: Students will be introduced to the Building Energy Asset Score. In this introductory webinar, students are guided through the Asset Score interface as part of creating a new building. They will develop an understanding of the basics for navigating within the tool and gain insight into some best practices for using the tool. Students will be made aware of other educational opportunities such as the video training curriculum, the community of users in the user forum, and getting help with models through the help desk.

Advanced Asset Score Modeling

Learning Objectives: Students will focus on how the Building Energy Asset Score Tool can accommodate them in complex real-world situations and deep-dive into complex scoring examples, including advanced HVAC inputs; constructing complex building geometries; importing data from EPA Portfolio Manager; exporting completed projects to OpenStudio Models.
